PPFAS Mutual Fund

About the fund:

PPFAS Long Term Value Fund (PLTVF) is an open ended equity oriented scheme with flexibility to invest a minimum of 65% in Indian equities and up to 35% in overseas equity securities and domestic debt / money market securities.

The core portfolio of PLTVF consists of equity investments made with a long term outlook and the factors considered while investing are quality of management, quality of the sector and the business (return on capital, entry barriers, capital intensity, use of debt, growth prospects etc) and the valuation of the companies. The endeavor of the fund management team is to identify opportunities for long term investments. However there are times when the opportunities are not attractive enough. While waiting for attractive opportunities, the fund invests in arbitrage opportunities between the cash and futures equity markets and special situations arbitrage where open offers / delisting / merger events have been announced. Investments are also made in money market / debt securities while waiting for deployment in core equity investments.

Foreign equity investments

Since investors in PLTVF invest in Indian rupees and seek rupee-based returns, the scheme too aims at delivering returns in rupees. Toward that end, it hedges most of its foreign currency exposure using exchange-traded currency futures.

Current StrategyEconomic outlook

PLTVF invests with an investment horizon of a minimum of 5 years. Since over the long term, the economic variables like interest rates, liquidity, GDP growth rate etc. can have a lot of fluctuations and in most cases see mean reversion, PLTVF focuses on company fundamentals more than macro economic variables. PLTVF does not seek to time the markets or to make top down investment strategies based on macro economic forecasts.

Corporate sector performance, valuations and current strategy

We have seen a 18% bounce from the lows that we saw towards the latter part of August. A lot of optimism is built around the delayed 'taper' of the liquidity pumping by the US Federal Reserve combined with the domestic optimism that we will in a few months time get some clarity on the political front in India.

Corporate results for the quarter ended September 30, 2013 have also reasonable assisted by strong performance of export related sectors especially Information Technology companies. Indian consumption relation sectors like Fast Moving Consumer Good companies have also had a reasonable performance. On the other hand sectors like capital goods and cement continue to see headwinds.

In our view such fluctuations will continue to happen in the course of investing and not much should be seen into them. We are not trying to predict the fortunes of different sectors over the coming quarters. We continue to identify companies on a bottom up basis where we feel that the current valuations do not capture the long term business prospects and the cash flow potential of the company.
